Fact sheet

Paying Taxes 2018
Global and Regional Findings: CENTRAL AMERICA & THE CARIBBEAN

The Paying Taxes report is a joint annual publication by PwC and the World Bank Group. This year marks the 12th year of the publication. The report is based on the World Bank Group’s Paying Taxes indicator within their Doing Business project and includes analysis and commentary by the World Bank and PwC.

The Paying Taxes indicator measures tax systems from the point of view of a domestic company complying with the different tax laws and regulations in 190 economies around the world. The case study company is a small to medium-size manufacturer and retailer with specific assumptions, deliberately chosen to ensure that its business can be compared worldwide on a like for like basis.

The Doing Business project, a World Bank Group annual publication which measures business regulations in 190 economies, has been collecting data on paying taxes for 13 years. Besides paying taxes, the Doing Business project provides measures of regulations in nine other areas: starting a business, dealing with construction permits, getting electricity, registering property, getting credit, protecting minority investors, trading across borders, enforcing contracts, and resolving insolvency. It also looks at labour market regulation.

Paying Taxes has historically measured the Total Tax and Contribution Rate (“TTCR”: the cost of all taxes borne, as a % of commercial profit), the time needed to comply with the major taxes (profit taxes, labour taxes and mandatory contributions, and consumption taxes), and the number of tax payments. Last year, for the first time, the Paying Taxes study included a new sub-indicator – the post-filing index. Filing a tax return with the tax authority does not imply agreement of the final tax liability and post-filing processes can be some of the most challenging interactions that a business has with a tax authority and can vary markedly from one jurisdiction to another. The new post-filing index is equally weighted with the three existing sub-indicators in order to determine the overall Paying Taxes ranking.

The Paying Taxes indicator measures all taxes and contributions mandated by government at any level (federal, state, or local) as they apply to the standardised business. The TTCR sub-indicator measures the cost of taxes and contributions that are borne by the company. The taxes included can be divided into 5 categories: profit or corporate income tax, social contributions and labour taxes paid by the employer (for which all mandatory contributions are included, even if paid to a private entity such as a requited pension fund), property taxes, turnover taxes and other taxes (such as municipal fees and vehicle taxes). The two original compliance sub-indicators, on the time to comply and number of payments, measure taxes borne and taxes collected, and so include taxes and contributions withheld or collected, such as sales tax or value added tax (VAT). The post-filing index measures two processes based on four components—time to comply with a VAT refund (hours), time to obtain a VAT refund (weeks), time to comply with the correction of an inadvertent corporate income tax error and deal with any resulting audit/enquiry (hours) and the time to complete/resolve a corporate income tax audit/enquiry if required (weeks).
Some important points to note are that:

1. The sub-indicators are calculated by reference to a particular calendar year. The effect of any change that takes place part way through the year is pro-rated. The most recent data in this study, Paying Taxes 2018, relates to the calendar year ended 31 December 2016.

2. The ranking order is based on the World Bank’s distance to frontier (DTF) measure which is used by the World Bank Group to evaluate each economy’s performance relative to the lowest and highest value of each sub-indicator rather than relative to the other economies. This means that economies can see how far they have progressed towards best practice, rather than simply looking at how they compare to other economies. A distance to frontier score is calculated for each of the four sub-indicators. The simple average of these four scores then gives the overall Paying Taxes distance to frontier. The distribution used to determine the distance to frontier score of the TTCR is non-linear. This means that movements in a TTCR that is already close to the lowest TTCR will have less of an impact on the DTF score. As in previous years, the lowest TTCR for the purposes of the ranking calculation is set at the 15th percentile of the overall distribution for all years included in the analysis up to and including Doing Business 2016, which is 26.1%. Economies with a TTCR below this value will therefore not be closer to the frontier than an economy with a TTCR equal to this value.

3. If in the course of collecting and analysing the data for 2016 it became apparent that data for previous years was incorrect, the necessary adjustments have been made and the sub-indicators recalculated for prior years. Rankings are only corrected for the immediate prior year. Any data that refers to 2015 and earlier years is therefore stated after such corrections have been made and so may differ from the data published in previous editions of this study including the global and regional averages.

The key themes and findings are:

- On average it takes our case study company 240 hours to comply with its taxes, it makes 24 payments and has an average Total Tax and Contribution Rate (TTCR) of 40.5%.

- The global average TTCR has increased by 0.1 percentage point. The small increase in the TTCR results from 52 economies increasing taxes while 36 recorded a reduction. It also represents a combination of a decrease in labour taxes offset by small increases in ‘other taxes’ while profit taxes remained constant.

- The time to comply has fallen by 5 hours to 240 hours since last year and the number of payments by almost one payment to 24 payments. These reductions are largely driven by the increased use of technology both by taxpayers and by tax authorities.

- In 2016, the largest decrease in time to comply is 90 hours in Palau due to improvements in the electronic filing system. Uzbekistan had the biggest improvement in the number of payments with a reduction of 48 as a result of developments in online filing and payments.

- 162 economies had a VAT system in 2016. In 51 of these no VAT refund is available to our case study company and 4 economies are not scored as VAT does not apply to capital purchases. In 107 of the 162 economies, it would be able to receive VAT refund.

- For those economies where a VAT refund is available, on average it takes our case study company 18.4 hours to comply with the necessary administration, and 27.8 weeks to receive the refund.

- If the likelihood of the VAT refund leading to an audit is less than 50%, the global average time to obtain a VAT refund is almost 16 weeks. If the likelihood of audit is more than 50%, it is just over 33 weeks.

- On average it takes less time to comply with a VAT refund in high income economies, (about 8.5 hours) than in low income economies (almost 43 hours).

- In high income economies, our case study company will on average obtain a VAT refund more quickly (just over 19 weeks) than in low income economies (almost 40 weeks).

- 180 economies levied corporate income tax in 2016. The post-filing index shows that in 81 economies there is a greater than 25% likelihood that correcting a corporate income tax return will lead to an audit
For these 81 economies, the time taken up by the audit is included in the time to comply with and complete a corporate income tax audit.

- On average, it takes the case study company 16 hours to correct the error in the corporate income tax return, including responding to an audit if one is triggered. If there are further interactions with tax authorities (including audits) after correcting the error, these last on average 27.3 weeks.

- On average, businesses spend 4.8 hours correcting an error in a corporate income tax return provided the tax authorities request no further information once the correction has been filed. This increases to 29.5 hours if the time for responding to further information requests from the tax authorities, including audits, are taken into account.

- In 62% of low income economies the correction of the corporate income tax error is expected to lead to an audit in more than 25% of cases, compared with 32% of high income economies.

- On average, in high income economies the time to correct a corporate income tax error and comply with any resulting audit is just over 13 hours compared to 24 hours in low income economies.

- Audits resulting from the correction of the corporate income tax error last on average just over 20 weeks in low income economies but more than 33 weeks in high income economies.

- The EU & EFTA region performs the best, on average, across the post-filing index with just over 7 hours to claim a VAT refund, just over 16 weeks to receive the refund, and just over 7 hours to correct a corporate income tax return and comply with any resulting audit. If a corporate income audit takes place, it will last just over 26 weeks. In 69% of the economies in the EU & EFTA region, the correction is expected to trigger an audit in less than a quarter of cases.
Regional details – Central America & the Caribbean

- The case study company has an average Total Tax & Contribution Rate (TTCR) of 42.1% in the Central America & the Caribbean region. It takes 206 hours to comply with its tax affairs and makes 31.2 tax payments.

- From 2015 to 2016, time to comply has decreased by 4 hours and the number of payments by 1.6 while TTCR in the region increased by 0.7 percentage points. Central America & the Caribbean remains the region where profit taxes account for the greatest share of the TTCR.

- The post-filing index score for the region is 51.90 (on a scale of 1 – 100) which is below the world average of 59.51. The region has the second longest time to obtain a VAT refund with 39.6 weeks.

- Central America & the Caribbean has a TTCR above the world average of 40.5%. Its number of payments sub-indicator is also above the world average of 24 payments and is the second highest among the regions. The region's time to comply is below the global average of 240 hours.

- The TTCRs of 9 of the 20 economies in the region are above the world average.

- In 2016, of the 20 economies in the Central America & Caribbean region, six increased their TTCR and only one decreased its TTCR. The largest increases occurred in the Dominican Republic (increase in corporate income tax as a result of inflation adjustments) and Trinidad and Tobago (increase in social security contribution and environmental tax). The only decrease in the region was in the Bahamas due to a reduction in the rate of stamp tax duty.

- Five of the 20 economies in the region take more time to comply than the world average of 240 hours. Of these, Panama has the highest time to comply at 417 hours.

- For 2016, at 31.2 payments, the average number of payments sub-indicator for the region is second only to Africa with 35.4 payments. This is driven by a lack of electronic filing and payment systems. 70% of the 20 economies in the region have a payment sub-indicator that is higher than the world average of 24.0 payments.

- The Bahamas has the highest post-filing score of 95.00 while Trinidad and Tobago has the lowest of 8.00. In Trinidad and Tobago, time to comply with a VAT refund is the longest (77 hours) and the time taken to correct a corporate income tax return and comply with the resulting audit takes 54 hours.

- 19 of the 20 economies in the Central America & the Caribbean region have a VAT system, though the case study company would not be able to obtain a refund in 6 of those.

- In the Central America & the Caribbean region, the average time to comply with a VAT refund for the 13 economies where a refund is available, is 21.1 hours and to obtain the VAT refund takes 39.6 weeks on average. The time to obtain VAT refund ranges from 2.2 weeks in the Bahamas to 89.5 weeks in Jamaica.

- Corporate income tax is levied in 19 of the 20 economies in the region. In 53% of these economies, there is greater than 25% likelihood that correcting the corporate income tax return will lead to an audit.

- It takes the case study company on average 15.8 hours to correct the error in the corporate income tax return and comply with any resulting audit. The shortest time for the correction is 1.5 hours in Dominica where the likelihood of audit is less than 25%. The longest time is in the Dominican Republic at 59.5 hours which includes time to respond to auditors’ requests.

- On average, across the 10 economies in the region where the likelihood of audit is more than 25%, the audit would take 42.6 weeks ranging from 5 weeks in Belize to 113.3 weeks in Jamaica.

---

1 The following 20 economies are included in our analysis of Central America & the Caribbean: Antigua and Barbuda; Bahamas, The; Barbados; Belize; Costa Rica; Dominica; Dominican Republic; El Salvador; Grenada; Guatemala; Haiti; Honduras; Jamaica; Nicaragua; Panama; Puerto Rico; St. Kitts and Nevis; St. Lucia; St. Vincent and the Grenadines; Trinidad and Tobago.

About the *Doing Business* report series

The *Doing Business* project provides objective measures of business regulations and their enforcement across 190 economies and selected cities at the subnational and regional level. The *Doing Business* project, launched in 2002, looks at domestic small and medium-size companies and measures the regulations applying to them through their life cycle. By gathering and analyzing comprehensive quantitative data to compare business regulation environments across economies and over time, *Doing Business* encourages economies to compete towards more efficient regulation; offers measurable benchmarks for reform; and serves as a resource for academics, journalists, private sector researchers and others interested in the business climate of each economy. In addition, *Doing Business* offers detailed subnational reports, which exhaustively cover business regulation and reform in different cities and regions within a nation. These reports provide data on the ease of doing business, rank each location, and recommend reforms to improve performance in each of the indicator areas. Selected cities can compare their business regulations with other cities in the economy or region and with the 190 economies that *Doing Business* has ranked. The first *Doing Business* report, published in 2003, covered 5 indicator sets and 133 economies. This year’s report covers 11 indicator sets and 190 economies. Most indicator sets refer to a case scenario in the largest business city of each economy, except for 11 economies that have a population of more than 100 million as of 2013 (Bangladesh, Brazil, China, India, Indonesia, Japan, Mexico, Nigeria, Pakistan, the Russian Federation and the United States) where *Doing Business*, also collected data for the second largest business city. The data for these 11 economies are a population-weighted average for the 2 largest business cities. The project has benefited from feedback from governments, academics, practitioners and reviewers. The initial goal remains: to provide an objective basis for understanding and improving the regulatory environment for business around the world.

About the World Bank Group

The World Bank Group plays a key role in the global effort to end extreme poverty and boost shared prosperity. It consists of five institutions: the World Bank, including the International Bank for Reconstruction and Development (IBRD) and the International Development Association (IDA); the International Finance Corporation (IFC); the Multilateral Investment Guarantee Agency (MIGA); and the International Centre for Settlement of Investment Disputes (ICSID). Working together in more than 100 countries, these institutions provide financing, advice, and other solutions that enable countries to address the most urgent challenges of development. For more information, please visit www.worldbank.org, www.miga.org, and ifc.org.

About PwC

At PwC, our purpose is to build trust in society and solve important problems. We’re a network of firms in 158 countries with more than 236,000 people who are committed to delivering quality in assurance, advisory and tax services. Find out more and tell us what matters to you by visiting us at www.pwc.com.
