Fact sheet

Paying Taxes 2019
Global and Regional Findings: Central Asia & Eastern Europe

The Paying Taxes report is a joint annual publication by PwC and the World Bank Group. This year marks the 13th year of the publication. The report is based on the World Bank Group’s Paying Taxes indicator within their Doing Business project and includes analysis and commentary by the World Bank and PwC.

The Paying Taxes indicator measures tax systems from the point of view of a domestic company complying with the different tax laws and regulations in 190 economies around the world. The case study company is a small to medium-size manufacturer and retailer with specific assumptions, deliberately chosen to ensure that its business can be compared worldwide on a like for like basis.

The Doing Business project, a World Bank Group annual publication which measures business regulations in 190 economies, has been collecting data on paying taxes for 14 years. Besides paying taxes, the Doing Business project provides measures of regulations in nine other areas: starting a business, dealing with construction permits, getting electricity, registering property, getting credit, protecting minority investors, trading across borders, enforcing contracts, and resolving insolvency. It also looks at labour market regulation.

Paying Taxes compares tax systems using four measures: the Total Tax and Contribution Rate ("TTCR": the cost of all taxes borne, as a % of commercial profit), the time needed to comply with the major taxes (profit taxes, labour taxes and mandatory contributions, and consumption taxes), the number of tax payments and the post-filing index. The four measures are each converted to a score of 0 – 100 and the simple average of these scores determines the overall Paying Taxes ranking.

The Paying Taxes indicator measures all taxes and contributions mandated by government at any level (federal, state, or local) as they apply to the standardised business. The TTCR sub-indicator measures the cost of taxes and contributions that are borne by the company. The taxes included can be divided into 5 categories: profit or corporate income tax, social contributions and labour taxes paid by the employer (for which all mandatory contributions are included, even if paid to a private entity such as a requited pension fund), property taxes, turnover taxes and other taxes (such as municipal fees and vehicle taxes). The two original compliance sub-indicators, on the time to comply and number of payments, measure taxes borne and taxes collected, and so include taxes and contributions withheld or collected, such as sales tax or value added tax (VAT). The post-filing index measures two processes based on four components—time to comply with a VAT refund (hours), time to obtain a VAT refund (weeks), time to complete a CIT correction (hours) and the time to complete a CIT correction (weeks).

Some important points to note are that:

1. The sub-indicators are calculated by reference to a particular calendar year. The effect of any change that takes place part way through the year is pro-rated. The most recent data in this study, Paying Taxes 2019, relates to the calendar year ended 31 December 2017.

2. The ranking order is based on the World Bank’s ease of doing business score (formerly called the distance to frontier score) which is used by the World Bank Group to evaluate each economy’s performance relative to the lowest and highest value of each sub-indicator rather than relative to the other economies. This means that economies can see how far they have progressed towards the best
regulatory performance, rather than simply looking at how they compare to other economies. A score is calculated for each of the four sub-indicators. The simple average of these four scores then gives the overall score on Paying Taxes. The distribution used to determine the score of the TTCR is non-linear. This means that movements in a TTCR that is already close to the lowest TTCR will have less of an impact on the score of the TTCR. As in previous years, the lowest TTCR for the purposes of the ranking calculation is set at the 15th percentile of the overall distribution for all years included in the analysis up to and including Doing Business 2016, which is 26.1%. Economies with a TTCR below this value will therefore not be closer to the best regulatory performance than an economy with a TTCR equal to this value.

3. If in the course of collecting and analysing the data for 2017 it became apparent that data for previous years was incorrect, the necessary adjustments have been made and the sub-indicators recalculated for prior years. Rankings are only revised for the immediate prior year. Any data that refers to 2016 and earlier years is therefore stated after such revisions have been made and so may differ from the data published in previous editions of this study including the global and regional averages.

The key themes and findings are:

- On average, it takes our case study company 237 hours to comply with its taxes, it makes 23.8 payments and has an average Total Tax and Contribution Rate (TTCR) of 40.4%.
- In 2017, the global average results are almost unchanged compared to last year, and yet 113 economies recorded tax reforms.
- Since 2004, the global average time to comply has fallen by 84 hours and the global average number of payments has fallen by 10.3 - both driven by technology.
- High performing economies are introducing even more advanced technology (e.g. machine learning), but some economies are finding it difficult to implement online filing and payment due to the lack of IT infrastructure, cultural barriers and complex legislation.
- On average, labour and profit taxes have each accounted for 40% of the TTCR since 2008.
- In 2017, the profit tax component of the TTCR fell in 58 economies and increased in 37, conversely the labour tax component of the TTCR rose in 39 economies and decreased in 17.
- The average TTCR is around 13% points higher in low-income economies than in high- and middle-income economies.
- The global post-filing score is 59.6 out of 100. The higher score the more efficient it is to receive VAT refunds and correct corporate income tax returns.
- On average around the world, our case study needs 19.6 hours to comply with a VAT refund and it takes 29 weeks to obtain the refund.
- The time to correct a corporate income tax takes 15.1 hours on average. If the correction results in further interaction with the tax authority, it takes 26.1 weeks from the submission of the correction until the completion of any interactions with the tax authority, including audits.
- Improving tax officers’ skills is vital for a well-functioning tax system: 97% of economies provide training to tax officers, but only 35% of economies offer regular, periodic training.

Regional details – Central Asia & Eastern Europe

1 The following 19 economies are included in our analysis of Central Asia & Eastern Europe: Albania; Armenia; Azerbaijan; Belarus; Bosnia and Herzegovina; Georgia; Israel; Kazakhstan; Kosovo; Kyrgyz Republic; Macedonia, FYR; Moldova; Montenegro; Russian Federation; Serbia; Tajikistan; Turkey; Ukraine; Uzbekistan.
• In 2017, in the Central Asia & Eastern Europe region, the average Total Tax & Contribution Rate was 32.8%. It took the case study company 220 hours to comply with its taxes and it made 15.9 tax payments.

• The Central Asia & Eastern Europe region performs better than the world average on all four indicators. Central Asia & Eastern Europe continues to be the most reformed region since the start of the study 2.

• The post-filing index score for the region is 62.4 (on a scale of 0 – 100) which is above the world average of 59.6. Central Asia & Eastern Europe performs better than most regions on average, coming third after the EU & EFTA and North America regions. All four components of the post-filing index take less time than the global average.

• Between 2016 and 2017, for the Central Asia & Eastern Europe region the average TTCR fell by 0.4 percentage points and the time to comply by 9.6 hours. The the number of payments remained unchanged.

• At 32.8%, the average TTCR for the region is below the world average of 40.4% and is the second lowest across the regions in 2017 after the Middle East which has an average TTCR of 24.4%.

• In 2017, out of the 19 economies in the region, the TTCR increased for nine economies while five economies experienced a decrease in their TCRs. The greatest reduction in the TTCR was in Georgia, by 6.5 percentage points to 9.9% as the corporate income tax is now levied only on distributed profits rather than on all taxable profits.

• In the majority of the economies in the region, labour taxes and mandatory contributions paid by employers account for the most significant portion of the TTCR, making up 54% of the average TTCR.

• In 2017, the Central Asia & Eastern Europe region’s average time to comply of 220 hours is 17 hours below the world average of 237 hours.

• There are five economies out of the 19 in the region that have a number of payments sub-indicator higher than the world average (23.8 payments).

• Serbia continues to have the most efficient post-filing processes in Central Asia & Eastern Europe with a post-filing index score of 91.1. The Kyrgyz Republic has the least efficient post-filing processes in the region with a post-filing index score of 37.4 as no VAT refund is available to the case study company and correcting the corporate income tax return would result in further interactions with the tax authority.

• All 19 economies in the Central Asia & Eastern Europe region have a VAT system, however in 7 of these a VAT refund is not available to the case study company.

• The average time to comply with a VAT refund for the region is 15.7 hours, which is below the world average of 19.6 hours. Serbia and Montenegro are the most efficient in time to comply with a VAT refund of 4.0 hours.

• In the Central Asia & Eastern European region, on average it takes 23.7 weeks to obtain a VAT refund. This ranges from 10.2 weeks in Georgia to 40.0 weeks in Israel.

• In the Central Asia & Eastern Europe region it would take the case study company on average 9.4 hours to correct an error in the corporate income tax return and deal with any subsequent interactions with the tax authority. The most efficient economies were Georgia and Belarus, where the likelihood of a review following a correction to a CIT return is less than 25% and it takes only takes 1.0 hours to correct the tax return. In Bosnia and Herzegovina it would take 30.0 hours to comply with a corporate income tax correction including further interactions with the tax authority, which is the most time consuming in the region.

---

2 Note that when reviewing trend data, we only include economies and cities for which we have data for every year of the study. As such there are only 174 economies included in the global trend data. 15 economies and 11 cities have joined the study since its inception and so are not included in the 12 year trends. For Central Asia & Eastern Europe, 17 economies are included in the historical dataset.
In the region, it takes 13.2 to complete a corporate income tax correction on average. This ranges from 5.3 weeks in Kyrgyz Republic to 19.0 weeks in Montenegro.

About the *Doing Business* report series

The Doing Business project provides objective measures of business regulations and their enforcement across 190 economies and selected cities at the subnational and regional level.

The Doing Business project, launched in 2002, looks at domestic small and medium-size companies and measures the regulations applying to them through their life cycle.

By gathering and analyzing comprehensive quantitative data to compare business regulation environments across economies and over time, Doing Business encourages economies to compete towards more efficient regulation; offers measurable benchmarks for reform; and serves as a resource for academics, journalists, private sector researchers and others interested in the business climate of each economy.

In addition, Doing Business offers detailed subnational reports, which exhaustively cover business regulation and reform in different cities and regions within a nation. These reports provide data on the ease of doing business, rank each location, and recommend reforms to improve performance in each of the indicator areas. Selected cities can compare their business regulations with other cities in the economy or region and with the 190 economies that Doing Business has ranked.

The first Doing Business report, published in 2003, covered 5 indicator sets and 133 economies. This year’s report covers 11 indicator sets and 190 economies. Most indicator sets refer to a case scenario in the largest business city of each economy, except for 11 economies that have a population of more than 100 million as of 2013 (Bangladesh, Brazil, China, India, Indonesia, Japan, Mexico, Nigeria, Pakistan, the Russian Federation and the United States) where Doing Business also collected data for the second largest business city. The data for these 11 economies are a population-weighted average for the 2 largest business cities. The project has benefited from feedback from governments, academics, practitioners and reviewers. The initial goal remains: to provide an objective basis for understanding and improving the regulatory environment for business around the world.

About the World Bank Group

The World Bank Group is one of the world's largest sources of funding and knowledge for developing countries. It comprises five closely associated institutions: the International Bank for Reconstruction and Development (IBRD) and the International Development Association (IDA), which together form the World Bank; the International Finance Corporation (IFC); the Multilateral Investment Guarantee Agency (MIGA); and the International Centre for Settlement of Investment Disputes (ICSID). Each institution plays a distinct role in the mission to fight poverty and improve living standards for people in the developing world. For more information, please visit www.worldbank.org, www.miga.org, and www.ifc.org.

About PwC

At PwC, our purpose is to build trust in society and solve important problems. We’re a network of firms in 158 countries with over 250,000 people who are committed to delivering quality in assurance, advisory and tax services. Find out more and tell us what matters to you by visiting us at www.pwc.com.

PwC refers to the PwC network and/or one or more of its member firms, each of which is a separate legal entity. Please see www.pwc.com/structure for further details.
